On page 2, at line 22, please ~~insert~~ --Brief Description of the Drawings--.

On page 3, above line 1, please ~~insert~~ --Detailed Description of the Invention--.

In The Claims

Please ~~add~~ the following new claims:

A2
CmT

--10. (Newly added) A text editing system having first and second independently and simultaneously operable text editors each of which has a processor adapted to display text in a window on a visual monitor; and a manual actuator enabling interaction between a user and text displayed in the window, the system further comprising means providing interactive connection between the two editors and for enabling text selected by an actuator in a monitoring window of one text editor to be inserted in the window of another editor, and at a location specified by the manual actuator of the other editor.

11. (Newly added) A text editing system according to claim 10 comprising first and second distinct monitors for the first and second text editors.

12. (Newly added) A text editing system according to claim 10, wherein at least one of the actuators is a mouse.

13. (Newly added) A text editing system according to claim 12 wherein one of the actuators is a touch-sensitive screen in combination with an artifact for touching the screen.

14. (Newly added) A text editing system according to claim 10 wherein the manual actuators are adapted to operate in conjunction with a graphical user interface in each of the windows.

15. (Newly added) A method of editing text comprising the steps of:

operating a first text editor to select text from a first document which is displayed in a first text-displaying visual window;

*A2
could* simultaneously operating a second text editor, operably distinct from the first text editor, to select a location within a second document, displayed on a second text-displaying visual window, at which the selected text of the first document is to be inserted; and

operating a graphical user interface in one of the windows to insert the selected text into the second document at the specified location.

16. (Newly added) A method according to claim 15, further wherein selection of the text in the first document is performed by operating a first manual actuator in conjunction with a graphical user interface for the first text editor, and selection of the location in the second document is performed by operating a second manual actuator; distinct from the first manual actuator, in conjunction with a graphical user interface for the second text editor.

17. (Newly added) A method according to claim 16, wherein the first and second text-displaying visual windows are provided on first and second monitors.

18. (Newly added) A method according to claim 15, wherein the first and second text editors are hosted on physically distinct machines, and the method includes sending text from a first machine to a second machine via a wireless link.--
